Types of Families

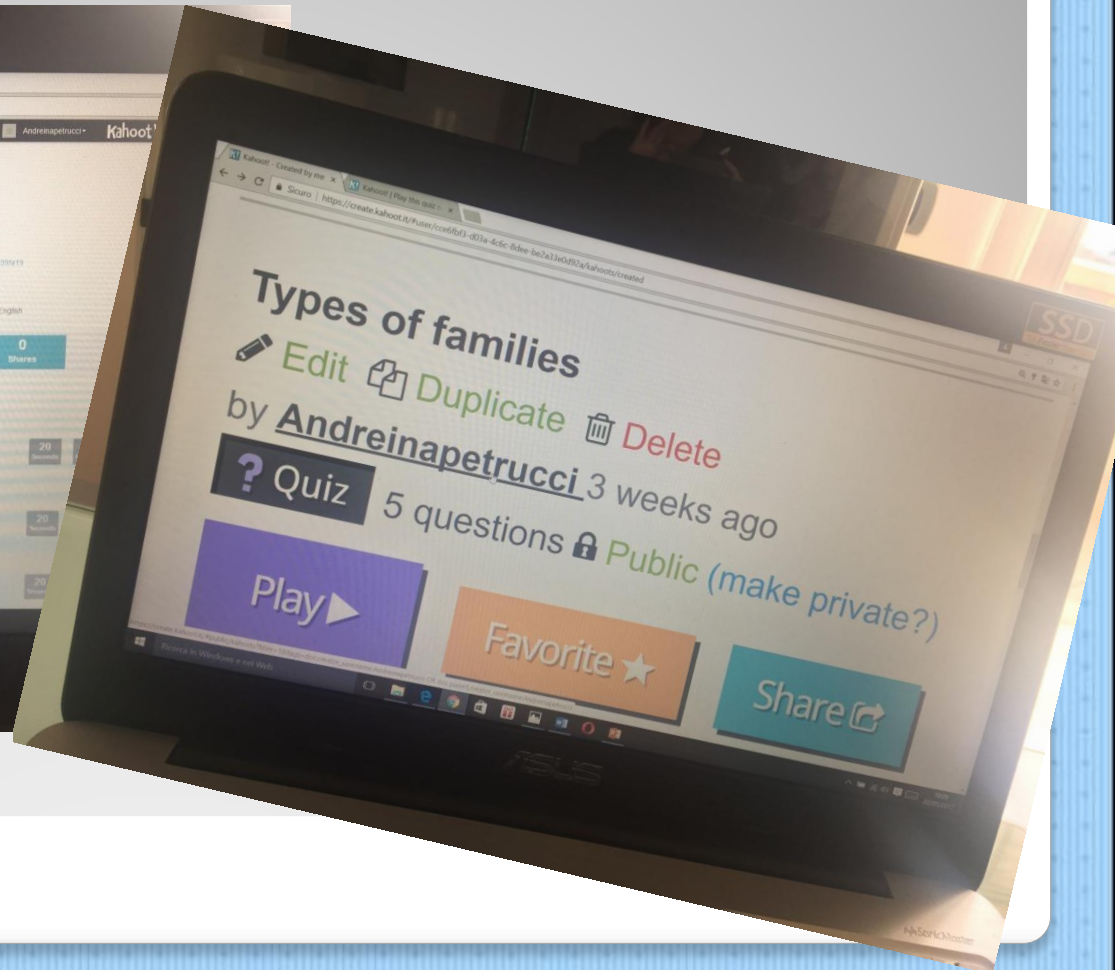

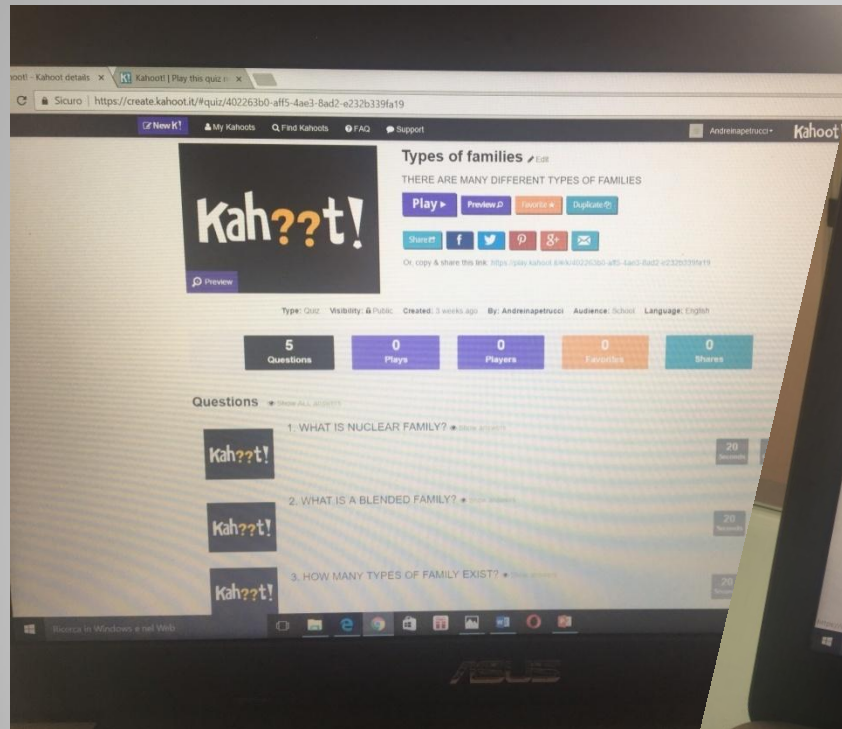

A family is a group of people that have a common ancestor. They usually live together in the same house. Not all families are the same, so they can be grouped into different types.

- 1- A **NUCLEAR FAMILY** consists of parents and their children living together. In many countries in Europe and North America this is the most common form of family. There are three types of nuclear families:
- in the first type the father works and the mother cares for the children;
 - in the second type, the mother works and the father stays at home with the children;
 - in the third type of family, both parents work. This last type of family is the most common in the USA and Canada, and Australia.
- 2- In an **EXTENDED FAMILY**, different family members such as grandparents, aunts, uncles and cousins **live together**. In many areas of the world, such as Asia, the Middle East, Africa, Latin America, and Southern Europe, this type of family is common.
- Recently in some countries, couples are choosing to **have only one child**. These
- 3- types of families are called **SINGLE CHILD FAMILY**. Some people believe that children living in these kinds of families are spoiled, selfish and lonely. But research doesn't support this.
- 4- **CHILDLESS FAMILIES** are families that have no children. The couples that make up these families sometimes make the choice not to have children because **they want to have more free time**. Some couples choose **not to have children for financial reasons**. There are also couples **who just can't have children**.
- 5- Families with only one parent are called **SINGLE PARENT FAMILIES**. There are several causes of these types of families:
- a - the first reason is divorce;
 - b - another reason is that one of the parents dies, leaving the surviving parent widowed;
 - c - additionally, some parents never get married in the first place.

When the husband or wife in a marriage brings children with them from a past marriage, this is called a **BLENDED FAMILY**.

FAMILIES IN ART: BOTERO'S FAMILIES

BOTERO'S SNAPSHOTS.

- **FAMILIES AND MATHS** – diagrams and graphs with the help of the Maths teacher!

statistic: the family

Realizzato con forza d'arimo

Statistics is a branch of **mathematics** dealing with the collection, analysis, interpretation, presentation, and organization of **data**.

1. inquiry

ask to your classmate about his family:

- a) Are you an only child?
- b) Have you got brothers or sisters?
- c) How many brothers/sisters have you got?
- d) How old is your brother/sister?
- e) What year is your brother/sister in?
- f) How old are your parents?
- g) What are your parents' jobs? (Work in a factory/office/shop/school/hospital/ at home...)
- h) Where are your parents from? (foreign country or part of Italy)
- i) How many grandfathers/grandmothers have you got? Do they live with you?
- j) How many cousins have you got? Are they younger or older than you?
- m) Have you got a pet? What is it?

Other questions

- a) Do you live near the school?
- b) How do you come to school? (bike/bus/mum's car/on foot).
- c) Do you have lunch with you family? Only with mum or dad? At your grandmother's house?...
- d) What do you do after dinner? Can you watch TV with you family?

2. tabulate

use a proper software (Excel, open office) to tabulate the data

3. chart

make a chart of the data

4. Find the mode

The **mode** is the value that appears most often in a set of data.

Frequency

In **statistics** the **frequency** (or **absolute frequency**) of an **event** is the number of times the event occurred.

These frequencies are often graphically represented in **histograms**.

Histograms

A histogram is a representation of tabulated frequencies, shown as adjacent **rectangles**. The height of a rectangle is equal to the frequency

Pie chart

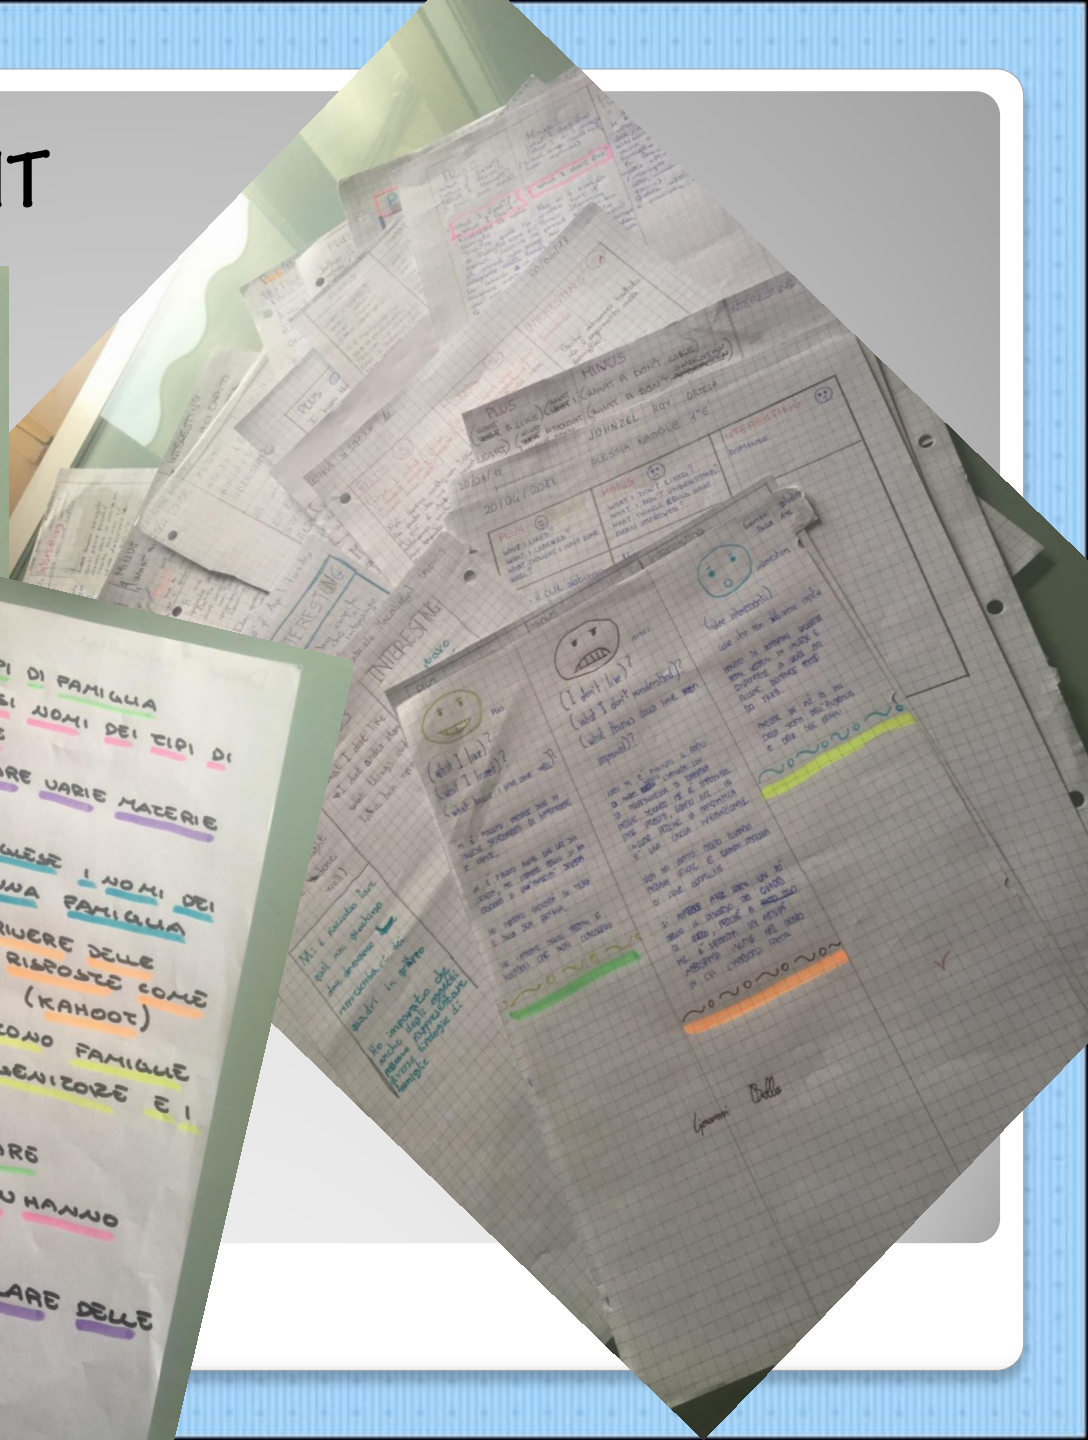

A pie chart (or a circle chart) is a
